

The picture package

Heiko Oberdiek*

<heiko.oberdiek at googlemail.com>

2016/05/16 v1.4

Abstract

There are macro and environment arguments that expect numbers that will internally be multiplied with `\unitlength`. This package extends the syntax of these arguments that `dimens` with calculation support can be added for these arguments.

1 User interface

1.1 Introduction

The environment `picture` and macros such as `\put`, `\line`, `\vector` and other macros have arguments that expect numbers that are used as factor for `\unitlength`. This package redefines such macros and adds code that detects whether such an argument is given as number or as length. In the latter case, the length is used directly without multiplying with `\unitlength`.

1.2 Options

Depending on the available features, also length expressions can be given. Option `calc` loads package `calc`. Then expressions of these package may be used. Otherwise `etex` wraps the length argument inside `\dimexpr...\relax`, if ε -TeX is available. Otherwise option `plain` uses plain assignments without calculation support.

The default is `calc` if package `calc` is loaded before package `picture`. If you specify option `calc` the loading of `calc` is ensured. Otherwise package `picture` looks whether `\dimexpr` is available and uses then option `etex` as default. If ε -TeX also could not be found, then `plain` is used.

1.3 Example

```

1 (*example)
2 \documentclass{article}
3
4 \usepackage[calc]{picture}
5
6 \begin{document}
7
8 \setlength{\unitlength}{1pt}
9
10 \begin{picture}(\widthof{Hello World}, 10mm)
11   \put(0, 0){\makebox(0,0)[lb]{Hello World}}%
12   \put(0, \heightof{Hello World} + \fboxsep){%
13     \line(1, 0){\widthof{Hello World}}%
14   }%
15   \put(\widthof{Hello World}, 10mm){%
16     \line(0, -1){10mm}%
17   }%
18 \end{picture}
19
20 \end{document}
21 /example)

```

1.4 Supported packages

Packages `pspicture` and `pict2e` are supported, but they must be loaded before package `picture`.

New macros can be supported by `\picture@redefine`. The first argument is the macro which contains the arguments in its parameter text that you want to support by package `picture`. The second argument contains the parameter text. Change `#` to `&` for the arguments in question. Examples (already used by package `picture`):

```

\picture@redefine\put{(&1,&2)}
\picture@redefine\line{(#1,#2)&3}

```

2 Implementation

2.1 Identification

```
22 (*package)
23 \NeedsTeXFormat{LaTeX2e}
24 \ProvidesPackage{picture}%
25 [2016/05/16 v1.4 Dimens for picture macros (HO)]%
```

2.2 Options

```
26 \def\Pc@calname{calc}
27 \def\Pc@etexname{etex}
28 \def\Pc@plainname{plain}
```

`\Pc@method` Macro `\Pc@method` stores the method to use for calculations. Check which features are available and set the default for `\Pc@method`.

```
29 \@ifpackageloaded{calc}{%

183 }%
184 \x
185 }

```

2.4.1 L^AT_EX base macros

```

186 \picture@redefine\@picture{(&1,&2)(&3,&4)}
187 \picture@redefine\put{(&1,&2)}
188 \picture@redefine\multiput{(&1,&2)}
189 \picture@redefine\@multiput{(&1,&2)}
190 \picture@redefine\line{(#1,#2)&3}
191 \picture@redefine\vector{(#1,#2)&3}
192 \picture@redefine\dashbox{&1(&2,&3)}
193 \picture@redefine\@circle{&1}
194 \picture@redefine\@dot{&1}
195 \picture@redefine\@bezier{#1(&2,&3)(&4,&5)(&6,&7)}
196 \picture@redefine\@makepicbox{(&1,&2)}

```

2.4.2 Package pspicture

Package pspicture changes the signature of \@oval by adding an optional argument.

```

197 \@ifpackageloaded{pspicture}{%
198 \picture@redefine\@oval{[&1](&2,&3)}%
199 \picture@redefine\Line{(&1,&2)}%
200 \picture@redefine\Curve{(&1,&2)}%
201 \picture@redefine\Vector{(&1,&2)}%
202 }{%
203 \picture@redefine\@oval{(&1,&2)}%
204 }

```

2.5 Check package loading order

\Pc@checkpackage

```

205 \def\Pc@checkpackage#1{%
206 \@ifpackageloaded{#1}{%
207 }{%
208 \AtBeginDocument{%
209 \@ifpackageloaded{#1}{%
210 \PackageWarningNoLine{picture}{%
211 Package `#1' is loaded after `picture'.\MessageBreak
212 Load package `picture' afterwards to get full support%
213 \MessageBreak
214 of its additional syntax with length specifications%
215 }%
216 }{ }%
217 }%

```

```

218 }%
219 }

220 \Pc@checkpackage{pict2e}
221 \Pc@checkpackage{pspicture}
222 </package>

```

3 Installation

3.1 Download

Package. This package is available on CTAN¹:

[CTAN:macros/latex/contrib/oberdiek/picture.dtx](#) The source file.

[CTAN:macros/latex/contrib/oberdiek/picture.pdf](#) Documentation.

Bundle. All the packages of the bundle ‘oberdiek’ are also available in a TDS compliant ZIP archive. There the packages are already unpacked and the documentation files are generated. The files and directories obey the TDS standard.

[CTAN:install/macros/latex/contrib/oberdiek.tds.zip](#)

TDS refers to the standard “A Directory Structure for T_EX Files” ([CTAN:tds/tds.pdf](#)). Directories with `texmf` in their name are usually organized this way.

3.2 Bundle installation

Unpacking. Unpack the `oberdiek.tds.zip` in the TDS tree (also known as `texmf` tree) of your choice. Example (linux):

```
unzip oberdiek.tds.zip -d ~/texmf
```

Script installation. Check the directory `TDS:scripts/oberdiek/` for scripts that need further installation steps. Package `attachfile2` comes with the Perl script `pdfatfi.pl` that should be installed in such a way that it can be called as `pdfatfi`. Example (linux):

```
chmod +x scripts/oberdiek/pdfatfi.pl
cp scripts/oberdiek/pdfatfi.pl /usr/local/bin/
```

3.3 Package installation

Unpacking. The `.dtx` file is a self-extracting `docstrip` archive. The files are extracted by running the `.dtx` through plain T_EX:

```
tex picture.dtx
```

TDS. Now the different files must be moved into the different directories in your installation TDS tree (also known as `texmf` tree):

```

picture.sty      → tex/latex/oberdiek/picture.sty
picture.pdf     → doc/latex/oberdiek/picture.pdf
picture-example.tex → doc/latex/oberdiek/picture-example.tex
picture.dtx     → source/latex/oberdiek/picture.dtx

```

If you have a `docstrip.cfg` that configures and enables `docstrip`’s TDS installing feature, then some files can already be in the right place, see the documentation of `docstrip`.

¹<http://ctan.org/pkg/picture>

3.4 Refresh file name databases

If your \TeX distribution (te \TeX , mik \TeX , ...) relies on file name databases, you must refresh these. For example, te \TeX users run `texhash` or `mktextsr`.

3.5 Some details for the interested

Unpacking with L \TeX . The `.dtx` chooses its action depending on the format:

plain \TeX : Run `docstrip` and extract the files.

L \TeX : Generate the documentation.

If you insist on using L \TeX for `docstrip` (really, `docstrip` does not need L \TeX), then inform the `autodetect` routine about your intention:

```
latex \let\install=y\input{picture.dtx}
```

Do not forget to quote the argument according to the demands of your shell.

Generating the documentation. You can use both the `.dtx` or the `.drv` to generate the documentation. The process can be configured by the configuration file `ltxdoc.cfg`. For instance, put this line into this file, if you want to have A4 as paper format:

```
\PassOptionsToClass{a4paper}{article}
```

An example follows how to generate the documentation with pdfL \TeX :

```
pdflatex picture.dtx
makeindex -s gind.ist picture.idx
pdflatex picture.dtx
makeindex -s gind.ist picture.idx
pdflatex picture.dtx
```

4 Catalogue

The following XML file can be used as source for the [\$\TeX\$ Catalogue](#). The elements `caption` and `description` are imported from the original XML file from the Catalogue. The name of the XML file in the Catalogue is `picture.xml`.

```

5 History

[2006/08/26 v1.0]

- First released version. (First start of the project was June/July 2002.)

[2007/04/11 v1.1]

- Line ends sanitized.

[2008/11/26 v1.2]

- Package pict2e added to documentation section “Supported packages”.
- Package order of supported packages is checked.

[2009/10/11 v1.3]

- Fix because of new version v4.3 of package calc.

[2016/05/16 v1.4]

- Documentation updates.
