

Package ‘valdr’

September 1, 2025

Title Access and Analyse 'VALD' Data via Our External 'APIs'

Version 2.0.0

Description Provides helper functions and wrappers to simplify authentication, data retrieval, and result processing from the 'VALD' 'APIs'.

Designed to streamline integration for analysts and researchers working with 'VALD's external 'APIs'.

For further documentation on integrating with 'VALD' 'APIs', see:

<<https://support.vald.com/hc/en-au/articles/23415335574553-How-to-integrate-with-VALD-APIs>>.

For a step-by-step guide to using this package, see:

<<https://support.vald.com/hc/en-au/articles/48730811824281-A-guide-to-using-the-valdr-R-package>>.

<code>.retry_key_get</code>	<i>Internal helper function to retry reading a key from the system keyring. This handles potential intermittent delays after writing to the keyring.</i>
-----------------------------	--

Description

Internal helper function to retry reading a key from the system keyring. This handles potential intermittent delays after writing to the keyring.

Usage

```
.retry_key_get(service, username, retries = 5, delay = 0.5)
```

Arguments

service	Character. Keyring service name (e.g., "valdr_credentials").
username	Character. Keyring username (e.g., "client_id").
retries	Integer. Number of retry attempts before giving up (default 5).
delay	Numeric. Delay in seconds between retry attempts (default 0.5).

Value

Character scalar. The retrieved credential value. Will throw an error if unable to retrieve a valid, non-blank value after all retries.

`get_config`

Retrieve stored VALD configuration

Description

Returns the configuration list previously set by `set_credentials()`. If credentials have not been set, this function will raise an error.

Usage

```
get_config(safe = TRUE, quiet = FALSE)
```

Arguments

<code>safe</code>	Logical; if TRUE (default), sensitive values are redacted in printed output (only when not quiet).
<code>quiet</code>	Logical; if TRUE, suppresses printed output (default FALSE).

Value

A named list containing the stored VALD configuration values for the current user. Sensitive values are redacted when printed with `safe = TRUE`. Returned invisibly.

`get_forcedecks_data`

Run full initial data fetch from the VALD ForceDecks API and External Profiles API

Description

This function is intended for first-time use or a full refresh of all datasets. It retrieves profiles, result definitions, tests (from a specified start date), and trials.

Usage

```
get_forcedecks_data(start_date = NULL)
```

Arguments

<code>start_date</code>	In ISO 8601 UTC format (e.g., "2025-06-25T00:00:00Z") indicating the start of the test retrieval window.
-------------------------	--

Value

A named list with data frames: `profiles`, `result_definitions`, `tests`, and `trials`. Each element contains the respective dataset fetched from the ForceDecks API.

Examples

```
## Not run:
# Fetch all data (profiles, results, tests, trials)
data <- get_forcedecks_data()
View(data$profiles)

## End(Not run)
```

get_forcedecks_result_definitions_only
Get only ForceDecks result definitions

Description

Wrapper around `get_forcedecks_result_definitions()` to refresh result definitions. Typically called infrequently unless definitions are known to have changed.

Usage

```
get_forcedecks_result_definitions_only()
```

Value

A data frame where each row corresponds to a ForceDecks result definition retrieved from the API.
 Returned invisibly.

Examples

```
## Not run:
# Fetch result definitions
results <- get_forcedecks_result_definitions_only()
View(results)

## End(Not run)
```

get_forcedecks_tests_only
Get only ForceDecks test data

Description

Wrapper around `get_forcedecks_tests()` if the user only wants test-level data without trials.

Usage

```
get_forcedecks_tests_only(start_date = NULL)
```

Arguments

start_date In ISO 8601 UTC format (e.g., "2025-06-25T00:00:00Z") indicating the start of the test retrieval window.

Value

A data frame containing ForceDecks test-level data.

Examples

```
## Not run:  
# Fetch only tests  
tests <- get_forcedecks_tests_only()  
View(tests)  
  
## End(Not run)
```

get_forcedecks_tests_trials

Run a standard session to get new ForceDecks tests and trials only

Description

Use this when profiles and result definitions have already been downloaded previously.

Usage

```
get_forcedecks_tests_trials(start_date = NULL)
```

Arguments

start_date In ISO 8601 UTC format (e.g., "2025-06-25T00:00:00Z") indicating the start of the test retrieval window.

Value

A named list with two data frames: **tests** and **trials**. These contain newly retrieved ForceDecks tests and their associated trial results.

Examples

```
## Not run:  
# Fetch tests and trials only  
session <- get_forcedecks_tests_trials()  
View(session$tests)  
View(session$trials)  
  
## End(Not run)
```

get_forcedecks_trials_only

Get trials for an existing test data frame

Description

Useful for re-running or extending analysis without re-downloading tests.

Usage

```
get_forcedecks_trials_only(tests_df)
```

Arguments

tests_df A data frame of tests (from get_forcedecks_tests() or a previous session)

Value

A data frame containing trial-level results corresponding to the input tests.

Examples

```
## Not run:  
# Fetch trials based on existing tests  
tests <- get_forcedecks_tests_only()  
trials <- get_forcedecks_trials_only(tests)  
View(trials)  
  
## End(Not run)
```

get_forceframe_data *Get ForceFrame test data*

Description

Wrapper around get_forceframe_tests() that also calls get_profiles() to ensure profile data is available before retrieving ForceFrame test data. Intended for use when you want to fetch Profiles information as well as ForceFrame tests from the API.

Usage

```
get_forceframe_data(start_date = NULL, profile_id = NULL)
```

Arguments

- | | |
|------------|---|
| start_date | (Optional) A UTC ISO 8601 datetime string (e.g. "2025-06-25T00:00:00Z") used to filter results by modification time. Input as a string. |
| profile_id | (Optional) A specific profile ID to filter results for a single athlete. Input as a string. |

Value

A data frame containing Profiles information and a data frame containing ForceFrame test data.

Examples

```
## Not run:  
# Fetch all recent ForceFrame tests along with Profiles information  
tests <- get_forceframe_data()  
View(tests)  
  
# Fetch ForceFrame tests for a specific profile  
get_forceframe_data(profile_id = "abc123")  
  
## End(Not run)
```

get_forceframe_tests_only

Get only ForceFrame test data

Description

Wrapper around `get_forceframe_tests()` to retrieve ForceFrame test data. Intended for use when you want to fetch ForceFrame tests.

Usage

```
get_forceframe_tests_only(start_date = NULL, profile_id = NULL)
```

Arguments

- | | |
|------------|---|
| start_date | (Optional) A UTC ISO 8601 datetime string (e.g. "2025-06-25T00:00:00Z") used to filter results by modification time. Input as a string. |
| profile_id | (Optional) A specific profile ID to filter results for a single athlete. Input as a string. |

Value

A data frame where each row corresponds to a ForceFrame test retrieved from the API. Returned invisibly.

Examples

```
## Not run:
# Fetch all recent ForceFrame tests
tests <- get_forceframe_tests_only()
View(tests)

# Fetch ForceFrame tests for a specific profile
get_forceframe_tests_only(profile_id = "abcd1234-ab12-cd34-ef56-abcdef123456")

## End(Not run)
```

`get_forceframe_test_by_id`

Get a single ForceFrame test by ID

Description

Wrapper around `get_forceframe_tests_by_id()` to retrieve a specific ForceFrame test. Intended for use when you want to fetch a single ForceFrame test record.

Usage

```
get_forceframe_test_by_id(test_id)
```

Arguments

<code>test_id</code>	(Required) The unique test ID for the ForceFrame test you want to retrieve.
----------------------	---

Value

A data frame with one row corresponding to the requested ForceFrame test. Returned invisibly.

Examples

```
## Not run:
# Fetch a ForceFrame test by ID
test <- get_forceframe_test_by_id("abcd1234-ab12-cd34-ef56-abcdef123456")
View(test)

## End(Not run)
```

get_nordbord_data *Get NordBord test data*

Description

Wrapper around `get_nordbord_tests()` that also calls `get_profiles()` to ensure profile data is available before retrieving NordBord test data. Intended for use when you want to fetch Profiles information as well as NordBord tests from the API.

Usage

```
get_nordbord_data(start_date = NULL, profile_id = NULL)
```

Arguments

<code>start_date</code>	(Optional) A UTC ISO 8601 datetime string (e.g. "2025-06-25T00:00:00Z") used to filter results by modification time. Input as a string.
<code>profile_id</code>	(Optional) A specific profile ID to filter results for a single athlete. Input as a string.

Value

A data frame containing Profiles information and a data frame containing NordBord test data.

Examples

```
## Not run:  
# Fetch all recent NordBord tests along with Profiles information  
tests <- get_nordbord_data()  
View(tests)  
  
# Fetch NordBord tests for a specific profile  
get_nordbord_data(profile_id = "abcd1234-ab12-cd34-ef56-abcdef123456")  
  
## End(Not run)
```

get_nordbord_tests_only *Get only NordBord test data*

Description

Wrapper around `get_nordbord_tests()` to retrieve NordBord test data. Intended for use when you want to fetch NordBord tests.

Usage

```
get_nordbord_tests_only(start_date = NULL, profile_id = NULL)
```

Arguments

- start_date (Optional) A UTC ISO 8601 datetime string (e.g. "2025-06-25T00:00:00Z") used to filter results by modification time. Input as a string.
- profile_id (Optional) A specific profile ID to filter results for a single athlete. Input as a string.

Value

A data frame where each row corresponds to a NordBord test retrieved from the API. Returned invisibly.

Examples

```
## Not run:
# Fetch all recent NordBord tests
tests <- get_nordbord_tests_only()
View(tests)

# Fetch NordBord tests for a specific profile
get_nordbord_tests_only(profile_id = "abcd1234-ab12-cd34-ef56-abcdef123456")

## End(Not run)
```

get_nordbord_test_by_id

Get a single NordBord test by ID

Description

Wrapper around `get_nordbord_tests_by_id()` to retrieve a specific NordBord test. Intended for use when you want to fetch a single NordBord test record.

Usage

```
get_nordbord_test_by_id(test_id)
```

Arguments

- test_id (Required) The unique test ID for the NordBord test you want to retrieve.

Value

A data frame with one row corresponding to the requested NordBord test. Returned invisibly.

Examples

```
## Not run:  
# Fetch a NordBord test by ID  
test <- get_nordbord_test_by_id("abcd1234-ab12-cd34-ef56-abcdef123456")  
View(test)  
  
## End(Not run)
```

get_profiles_only *Get only VALD profiles*

Description

Wrapper around `get_profiles()` to retrieve VALD profiles. Useful if profile data needs to be refreshed independently.

Usage

```
get_profiles_only()
```

Value

A data frame containing VALD profiles information for the stored `tenant_id`.

Examples

```
## Not run:  
# Fetch profiles  
profiles <- get_profiles_only()  
View(profiles)  
  
## End(Not run)
```

get_start_date *Retrieve the start date from config*

Description

Returns the saved start date string from the config file.

Usage

```
get_start_date()
```

Value

A character scalar containing the start date string in ISO 8601 format previously saved to configuration.

<code>set_credentials</code>	<i>Set and Save VALD API Credentials</i>
------------------------------	--

Description

Securely stores VALD API credentials in the system keyring and saves non-sensitive configuration to a JSON config file in the user's home directory for reuse across sessions.

Usage

```
set_credentials(client_id, client_secret, tenant_id, region)
```

Arguments

<code>client_id</code>	Your VALD API Client ID (stored securely in keyring)
<code>client_secret</code>	Your VALD API Client Secret (stored securely in keyring)
<code>tenant_id</code>	Your VALD Tenant ID
<code>region</code>	The VALD data region code (e.g., "aue", "use", "euw")

Details

Sensitive values (client ID and secret) are never written to disk and are retrieved securely from the keyring when needed.

Value

Invisibly returns TRUE if credentials and configuration were saved successfully.

<code>set_start_date</code>	<i>Set and persist the start date</i>
-----------------------------	---------------------------------------

Description

Saves the provided ISO 8601 start date to the config file.

Usage

```
set_start_date(start_date)
```

Arguments

<code>start_date</code>	Date in ISO 8601 UTC format, e.g., "2025-06-25T00:00:00Z"
-------------------------	---

Value

A logical scalar (TRUE), returned invisibly, indicating that the start date was saved and persisted successfully.
